

ACKNOWLEDGEMENTS

The 1991-93 excavations at Huccorgne-Hermitage were made possible by the gracious permission of the landowners, M. et Mme. Dock and Mme. Smetz. The Dock family in particular cheerfully put up with our digging in their lawn and provided us with material assistance which is very much appreciated. The excavations were authorized by the Commission Royale des Monuments, Sites et Fouilles de la Région Wallonne.

Funds for the excavations were provided by grants from the US National Science Foundation, the L.S.B. Leakey Foundation, the National Geographic Society, the Service de l'Achéologie de la Région Wallonne and Services Fédéraux des Affaires Scientifiques, Techniques et Culturelles de Belgique. Material support was also provided by the Service de Préhistoire de l'Université de Liège, the University of New Mexico and the City of Dinant.

For their hard, careful work, we wish heartily to thank the excavation crews, principally from the University of New Mexico and the Université de Liège, but also from several other American, European, Asian & African universities. In particular, Rebecca Miller and Anthony Martinez (UMN) and Pierre Noiret and Vincent Ancion (ULg) deserve special recognition for their professional efforts in various aspects of the research at Huccorgne. The project profited from the help and advice of Jean-Marc Léotard and Philippe Lacroix (ULg/Service de Fouilles de la Région Wallonne). The observations of Jules Haeck (Chercheurs de la Wallonie) were very useful.

In addition, we would like to thank the collaborating scientists: Achilles Gautier, the late Harrold Krueger, Margaret Newman, Claudine Noirel-Schutz, Thomas Stafford--even if, in some cases, their results were negative due to preservation problems.

Straus wishes to thank Haesaerts and Daniel Cahen (Director of the Institut Royal des Sciences Naturelles de Belgique) for permitting him and Martinez to study the collections from the IRSNB excavations directed by Haesaerts in 1976 & 1980 at Huccorgne. Martinez was assisted by Michel Guilbaud in his study of the core from our excavations which he had refitted. Otte thanks Joseph Destexhe-Lamotte of Saint-Georges-sur-Meuse, for permission to preliminarily study his collections from Huccorgne.

The site plan was drafted by Martinez. Stratigraphic sections drafted by Straus were redrafted by Ronald Stauber and Martinez (both UNM) and by Yvette Paquay-Baele (ULg). Artifact drawings originally done by Straus, Otte, Kaoru Akoshima (UNM & Tohoku University) and several students (notably Jennifer Veser of New College, Florida), were redrafted by Paquay-Baele.

Rebecca Miller (UNM/ULg) successfully undertook the major task of coordinating this publication, assembling the manuscripts and preparing the whole volume for the printer.

Nos vifs remerciements à toutes et à tous!

Lawrence Straus & Marcel Otte
Albuquerque & Liège, October 2000.
