

## ACKNOWLEDGMENTS

I would like to first thank the members of my committee, Dr. Lawrence Straus (chairman), Dr. James Boone, Dr. Robert Santley and Pr. Marcel Otte, for many hours of fruitful discussion, their suggestions and comments during all stages of research and writing of this dissertation, and their friendship and support.

I was first introduced to Belgium and the Belgian Paleolithic by my participation in the South Belgium Paleolithic Project, thanks to the opportunity offered by Dr. Straus, and my interest in the subject of my dissertation was strongly influenced by the nature of the archaeological record in this region. Following the termination of my Fulbright fellowship in 1997, I was (and am) able to continue working in Belgium thanks to the support of Pr. Otte, who has engaged me as a researcher in the Service de Préhistoire. With his support, I was able to continue working on my dissertation and participate in ongoing research projects of the Université de Liège.

Several sources of funding made it possible to undertake this research in Belgium. First, the South Belgium Paleolithic Project, a five-year project on the Upper Paleolithic and Mesolithic in Belgium directed by Drs. Straus and Otte, was funded by the National Science Foundation, the National Geographic Society and the L.S.B. Leakey Foundation (Straus) and the Communauté française and the Région wallonne of Belgium (Otte).

Second, fellowships from the Belgian American Educational Foundation (Dr. Emile Boulpaep, Director) and the Commission for Educational Exchange Between the United States of America, Belgium and Luxembourg: The Fulbright Foundation (Margaret Nicholson, Director) enabled me to conduct the majority of my dissertation research in Belgium, for academic years 1994-95 and 1996-97, respectively. Without their assistance, access to archaeological collections, lithic reference collections and libraries in Belgium and The Netherlands, as well as geological survey, would have been next to impossible.

I would also like to thank all of the researchers in Belgium and The Netherlands who granted access to museum collections and lithic reference collections. In addition, and perhaps more importantly, I thank them for their ongoing friendship. These include Dr. Daniel Cahen, Dr. Ivan Jadin, Mme Anne Hauzeur (Institut Royal des Sciences Naturelles de Belgique, Brussels, Belgium); Dr. Anne Cahen-Delhayé, Dr. Nicolas Cauwe (Musées Royaux d'Art et d'Histoire, Brussels, Belgium); Dr. Marie Gheury (Musée Curtius, Liège, Belgium); M. Pierre Cattelain (Musée du Malgré Tout, Treignes, Belgium); Dr. Marjorie de Grooth (Bonnesfonten Museum, Maastricht, The Netherlands); Professor Pierre Vermeersch and Dr. Philip Van Peer (Katholieke Universiteit, Leuven, Belgium).

Many others contributed to this dissertation by offering valuable advice and commentary at all stages of my research. I would like to thank the following, among others: Dr. Gerhard Bosinski (Schloss Monrepos, Neuwied, Germany), M. Fernand Collin (Musée de Ramioul, Flémalle), Dr. Nicholas Conard (Universität Tübingen), Professor Michel Dewez (Catholique Université, Louvain-la-Neuve), Dr. Jean de Heinzelin (IRSNB) (in memoriam, 1998), Dr. Marvin Kay (University of Arkansas), Dr. Jack Rink (McMaster University, Hamilton, Canada), Professor Avraham Ronen (Haifa University, Haifa, Israel), Dr. Martin Street (Schloss Monrepos, Neuwied, Germany), and Professor Pierre Vermeersch (Universität Katholieke, Leuven).

For all their help, advice and friendship, I would like to thank Vanessa Amormino, Vincent Ancion, Emmanuel Delye, Florence Dentz, Josiane Derullieur, Karl Engesser, Sophie Fettweis, Pascale Fraiture, Yves Hanlet, Ignacio and Isabelle López Bayón, Sylvia Menendez, Pierre Noiret, Frédérique Ramon, Laurence Remacle, Valéry Sitlivy, Henri Straet, Eric Teheux, Marguerite Ulix-Closset, and Sandrine Vandercasteel. I apologize for any inadvertent omissions.

Finally, I would like to thank my parents, Pat and Diane Miller, my brothers and sisters, Amy, Dan and Nick, and my friends, Seema Chandnani and Cheryl Signore, for supporting me during the many years of study and research.
